## INTRODUCTION - (Please read to client. Can be adapted for local circumstances)

I am going to ask you some questions about your experience of using alcohol, tobacco and other drugs throughout your life, and in the past three months. These substances can be used in different ways, for example they can be smoked, swallowed, snorted, inhaled or placed under the tongue.

It is important that you try and answer each of the questions as honestly and accurately as possible. The information you give will be treated as strictly confidential/private, but I will need to let your parents/guardians know if your substance use is placing you 'at risk' in any way, or if your immediate safety is threatened. If I feel like it would be helpful for your parents/guardians to know any of this information, I will discuss this with you first. As we go through the questions, please let me know if you would like me to repeat any of them, or if there is something you don't understand.

**Note: There may be situations where the client is using substances for medicinal purposes (eg. pain medication, ADHD management). Do not record medications if the client is using the medications as prescribed by their doctor (eg. correct dose, route and frequency).**

**Avoid providing too much detail regarding specific substance names or types. Refer to broad substance groups unless the client indicates use.**

## Question 7 (please circle the star as per the response)

	No, Never	Yes, in the past 3 months	Yes, but not in the past 3 months
Have you ever used any drug by injection? (NON-MEDICAL USE ONLY)	★	★	★

Clients reporting drug use via injection are automatically classified as 'high risk', and require both brief intervention and referral to specialist assessment and treatment.

### HOW TO CALCULATE A SPECIFIC SUBSTANCE INVOLVEMENT SCORE.

For each substance (labelled a. to j.) add up the scores received for questions 2 through 6 inclusive. Do not include the results from Q1 in this score. For example, a score for cannabis would be calculated as: Q2c + Q3c + Q4c + Q5c + Q6c.

Note that Q5 for tobacco is not coded, and is calculated as: Q2a + Q3a + Q4a + Q6a.

### THE TYPE OF INTERVENTION IS DETERMINED BY THE PATIENT'S SPECIFIC SUBSTANCE INVOLVEMENT SCORE

		Moderate Risk	High Risk
	Record specific substance score	Brief Intervention as part of a broader assessment	Brief Intervention and referral to specialist assessment and treatment
		SCORE	SCORE
a. Tobacco		2-11	12+
b. Alcohol		5-17	18+
c. Cannabis		2-11	12+
d. Cocaine		2-6	7+
e. Amphetamines		2-8	9+
f. Inhalants		2-8	9+
g. Sedatives		2-6	7+
h. Hallucinogens		2-8	9+
i. Opioids		2-6	7+
j. Other		2-6	7+

**Note:** For alcohol, a substance involvement score of less than 5 does not warrant a brief intervention. It is still recommended, however, that healthcare professionals discuss the risks associated with use of these substances, as well as monitor future use.

Now use the ASSIST FEEDBACK REPORT CARD to give the client feedback about their risk scores as part of the brief intervention.
